1	Highway users on Old Vicarage Lane	Low	Low	Adjacent	Partial	Yes	Medium (construction) Medium-Low (year 1) Low (year 15)	This is a representative view for highway users. They experience transient close range views of the site and Old Vicarage Lane. Open close range views of the development's GI would be observed and the new built development (housing) would be largely screened by the intervening GI. Transient and close range views of the proposed new access arrangement would be afforded. Users would experience this within an existing highway context. It is considered that the overall experience for highway users would not be significantly ffected to any degree such that it would lead to any significant harm.	Moderate-Minor Adverse	Minor Adverse Negligible	Negligible
2	Users of Public Footpath	High	Medium	Within site	Partial	Yes	Medium (construction) Medium -Low (year 1) Low (year 15)	View from Footpath. Open close range views of the site are afforded with views of industrial buildings on skyline and nearby passing trains. Users would experience views of the proposed GF in the foreground with new built development (housing) beyond. Whilst there would be a clear change in the view and there would be views of new housing it is considered that the overall experience for footpath users would not be significantly affected. Users would walk through an extensive area of GI of grassland and woodland habitats which, once established, would 'soften' the view of the built form	Moderate Adverse	Minor Adverse	Minor Adverse Negligible
3	Users of Public Bridleway	High	Medium	Within site	Partial-Full	Yes	High-Medium (construction) High-Medium (year 1) Medium (year 15)	Representative view from Bridleway. Open close range views of the site are afforded. Users would experience close range and transient views of the proposed built development (housing, primary school, mixed use local centre and primary street). Clear change in the experience from agricultural use to built development . Bridleway retained in 'green corridor' with planting, once established, filtering views. Experience for users would be different, but it is considered that views of a high quality development would not be intrinsically harmful.	Major-Moderate Adverse	Moderate Adverse	Minor Adverse
4	Residents on Old Vicarage Lane	High	Medium	Adjacent	Partial-Full	Yes	High-Medium (construction) Medium (year 1) Low (year 15)	Close range views are afforded of the site, together with first floor views of South Marston. Views would be afforded of the adjacent GI (allotments) near Old Vicarage Lane with views of new built development (housing) beyond facing Old Vicarage Lane. A small	Major-Moderate Adverse	Moderate Adverse	Minor Adverse

								number of receptors (residents in six properties) would be directly impacted. Adverse effects would diminish in the long term on account of a maturing GI which would provide some filtering of the view of built development			
5	Users of Public Bridleway near Mercure Hotel	High	Medium	Adjacent	Partial-Full	Yes	High-Medium (construction) High-Medium (year 1) Low (year 15)	Representative view from Bridleway. Open close range views of the site are afforded together with views of Mercure Hotel and car park, and residential edge of South Marston. Users would experience close range and transient views of the proposed built development (housing). It is considered that views of a high quality development, whilst noticeable, would not lead to a significant adverse impact on the experience for bridleway users in the long term	Major-Moderate Adverse	Moderate Adverse	Minor Adverse
6	Users of Public Footpath near South Marston Brook	High-	High-	Within site	Partial	Yes	High-Medium (construction) High-Medium (year 1) Low (year 15)	Representative view from Footpath. Open close range views of the site are afforded together with views of Rowborough Farm. Users would experience close range and transient views of the intervening GI (woodland and hedges) with the proposed built development (housing) beyond. Footpath would be contained in a broad corridor of greenspace. The experience for users would be different, but it is considered that views of a high quality development would not lead to a significant adverse impact in the long term. The maturing GI would provide some filtering of the view of the built development in the longer term.	Major-Moderate Adverse	Moderate Adverse	Minor Adverse
7	Users of Public Footpath near South Marston Brook	High	Medium	Within site	Partial	Yes	High-Medium (construction) Medium (year 1) Low (year 15)	Representative view from Footpath Open close range views of the site are afforded together with views of vegetation along Marston Brook. Users would experience close range and transient views of the GI and the proposed built development (housing) beyond. Retained vegetation along Marston Brook and a maturing GI would provide some filtering and some containment of the view of the built development. The Footpath would be contained in a broad corridor of greenspace. It is considered that views of a high quality development would not lead to a significant adverse impact so as to lead to any unacceptable harm on these receptors in the long term.	Moderate Adverse	Moderate – Minor Adverse	Minor Adverse
8	Highway Users on	Low	Low-	Adjacent	Partial	Yes	High-Medium	Transient views for receptors of site and buildings on Nightingale Lane	Moderate	Moderate-Minor	Minor Adverse

	Nightingale Lane		Medium				(construction) Medium (year 1) Low (year 15)	and on the edge of South Marston. Vegetation on Nightingale Lane provides some filtering and limits the extent of visibility across the site. Close range fleeting views would be afforded of the built development (housing) softened and filtered by existing and new vegetation. It is judged that new high quality residential development would not give rise to any unacceptable harm on these receptors. Receptors are judged to be of low sensitivity asare moving through the landscape and their experience includes views of residential properties in South Marston.	Adverse	Adverse	
9	Highway Users onNightingale Lane (eastern section)	Low	Low	Adjacent	Partial	Yes	High-Medium (construction) High -Medium (year 1) Low (year 15)	A break in the hedgeline provides open close range view of the northern part of the site together with views of Nightingale Wood. Close range fleeting views would be afforded of the built development (housing). These views would be over a short duration and receptors are judged to be of low sensitivity. It is judged that new high quality residential development would not give rise to any significant harm on these receptors.	Moderate Adverse	Moderate Adverse	Minor Adverse
10	Users of Public Bridleway on the edge of Nightingale Wood	High-	Medium	Within site	Partial -Full	Yes	High-Medium (construction) High-Medium (year 1) Low (year 15)	Representative view from Bridleway as receptors exit Nightingale wood,. Open close range views of the site's eastern edge afforded, together with views of the edge of Nightingale Wood. The bridleway would remain in situ and would be set within a wide green corridor that would include new planting. Users would experience close range views of proposed built development (housing) beyond. Whilst there would be a level of change it is considered that views of a high quality development would not lead to a significant adverse impact so as to lead to any unacceptable harm on these receptors	Major-Moderate Adverse	Moderate Adverse	Minor Adverse

	Bridleway							buildings at Thornhill Road industrial estate. Existing mature tree cover, north of Manor Farm, provides some screening and filtering effects. Views would be afforded of the GI and the new built development (housing) although existing vegetation and a maturing GI would provide some filtering of the view of the built development. Views of the built development would be observed as part of the backdrop of residential/industrial buildings on the edge of South Marston.			
17	Users of Public Footpath near Ash Gardens	High-	High-	Within site	Partial-Full	Yes	Medium construction) Low-Medium (year 1) Low (year 15)	Representative view for footpath users. Views are afforded of the field behind Rawlings Gardens and Bell Gardens, as well as the properties themselves. Close range views would be afforded of the new built development (housing) and the GI. Views of the built development would be observed within the context of the existing backdrop of modern residential properties that are apparent in the view. It is judged that the experience for receptors would not be adversely affected to any significant degree as they already afford view of the residential edge of South Marston.	Moderate Adverse	Moderate-Minor Adverse	Negligible
18	Highway Users on Thornhill Road	Low	Low	100m	Glimpsed	Yes	Low (construction) Low (year 1) Low-None (year 15)	Visibility into the site is heavily restricted by the intervening built form and by hedge/tree cover along Thornhill Road. Fleeting views would be afforded of the proposed new access arrangement into the development. This would be observed within an existing highway context that includes nearby roundabouts, 'A' roads, and employment buildings e.g. Keypoint interchange, which are urban influences. There would be no significant adverse effect for receptors.	Minor Adverse-Negligible	Negligible	Negligible
19	Highway Users On A420	Low	Low	200m	Glimpsed	Yes	Low -None (construction) Low (year 1) Low –None (year 15)	View for highway users. Visibility into the site is restricted by intervening hedges and trees. Users experience views of the buildings along the A420, whilst their main focus is the highway corridor and activity along it. Highway users are of low sensitivity and they are passing through the landscape at speed. The southern part of the site includes an extensive area of GI which would include woodland and tree cover. Views of the built development would be contained by this GI framework ,and by existing features within the local landscape.	Minor Adverse Negligible	Negligible	Negligible
20	View from AONB	High	Medium	4.4km	Glimpsed	Yes	None (construction)	View from the edge of the AONB. There are some elevated vantage	Negligible	Negligible-None	Negligible-None

	Near Bodyhorse Hill						None (year 1) None (year 15)	points from the escarpment that provide opportunities for long ranging views across the Upper Thames Clay Vale and Midvale Ridge. The extensive urban area of Swindon is visible and a noticeable feature within the valley. The proposed development would be around 4km and would be seen as part of, and within, the context of the urban area of Swindon. As well as distance, hedgelines and trees within the valley, a further layer of containment would be created by the GI framework of new planting around the perimter of the site. With the development in place receptors would continue to experience long ranging panoramic views across the valley and the proposed development would not materially impact upon that experience. In conclusion the development would not give rise to any marked adverse impact on visual receptors within the AONB.			
21	Highway Users Wanborough Road	Low	Low	1.5km	Glimpsed-None	Yes	Low-None (construction) None (year 1) None (year 15)	This is an elevated vantage point and highway users afford transient views of the urban/industrial edge of Swindon to include Keypoint interchange. Views of the site are largely screened by intervening hedges and trees as well as the existing built form on the edge of Swindon. View of the proposed development would be difficult to percept	Negligible	None	None
22	Users of Thornhill Road	Low	Low	200m	None	Yes	None (construction) None (year 1) None (year 15)	No views of the site are afforded for highway users. Thornhill Road Industrial Estate and tree cover effectively screen views of the site.	None	None	None
23	Users of Public Bridleway near Manor Farm	High-Medium	High-Medium	Within site	Partial	Yes	High-Medium (construction) Medium (year 1) Medium-Low (year 15)	Representative view for Bridleway users. Views are afforded of the western and north western part of site to include fields and surrounding tree cover, with filtered views of industrial buildings at Thornhill Road. The Bridleway is retained and is located within a broad area of greenspace. Close range views of the proposed development's primary street would be observed as well as the proposed GI of woodland, hedges and trees. The experience for receptors would not be adversely effected to any marked degree such that it would result in any sigtnificant harm	Moderate – Minor Adverse	Minor Adverse	Minor Adverse Negligible

VISUAL BASELINE & EFFECTS TABLE (VBET)[1]
