> **Flood risk**
>
> I recently moved to a property on Old Vicarage Lane. Although the property has not itself been flooded I am aware of the previous flooding to manor cottages and the potential risk of ground water flooding in the area. Over the course of the recent wet winter it was extremely evident the level of water accumulating in fields impacted by the proposed developments in the area of manor cottages. I therefore strongly heed the council to take note of the comments from the drainage engineer and to ensure that the requirements and principles outlined in para 103 of the NPPF and in Policy EN6 of the local plan are ***fully and comprehensively*** adhered to. It should be absolutely a requirement of the proposed development that there should be no increased risk of flooding to existing properties at a minimum. Under the current plans, given the pattern of water flow in the area, I fail to understand how this will be achieved.
>
> I note from the plans that an access road is proposed through the fields opposite Manor Cottages. I understand that there is an existing Iron Age drainage system in this area. Again, it was very evident over

the wet winter how much water accumulates and flows in this area. It is therefore imperative that any existing feature that may be reducing the flood risk is not disturbed and that additional measures are put in place to offset any impact of further development.

Access

The current plans with regards to access to the proposed development, in particular the new village of Rowborough seem entirely inadequate. According to the current plans it appears that new tunnel access to Rowborough directly from the A420 will only be required after the construction of a significant number of houses. Until this time all access will be via the roads to be constructed from Old Vicarage Lane. Adding such a substantial quantity of traffic to this stretch of road is simply not practicable or safe. The proposal to add traffic lights for the A420 whilst continuing to increase traffic flow so substantially will simply result in a back log of traffic into the village exacerbating existing safety concerns. If the scale of the proposed development at Rowborough is to remain so large then proper provision for direct access via the A420 tunnel should be a prerequisite of starting development or having completed only a very small aspect of the construction such that traffic impact would be minimal. If appropriate direct access from the A420 is required then I see no reason for 2 access roads to be the built from Old Vicarage Lane into Rowborough.

Although I accept that this development is inevitable I still fail to understand how the already severely congested A420 will cope with the additional burden of traffic in the area and remain extremely concerned that South Marston will be used even more as a "rat run" than it already is, particularly given the new road from Old Vicarage Lane to Thornhill Road and the proposed access from Rowborough.

Kind regards

Dr Katherine Bowen
Old Vicarage Lane, South Marston.
