Turley

1st November 2024

Delivered by Email

Mr Barry James
Swindon Borough Council
Civic Offices
Euclid St
Swindon SN1 2JH

Dear Barry

S/RES/24/0923 – RESERVED MATTERS APPLICATION AT LAND AT PARCELS R8 AND R9 (EAST AND WEST OF OLD VICARAGE LANE) LAND NORTH OF A420 NEW EASTERN VILLAGES, SOUTH MARSTON, SWINDON – RESPONSE TO APPLICATION COMMENTS

Further to discussions during a recent meeting with the Council on the 17th September 2024 and following receipt of a number of statutory consultee responses during the application determination period to date, we write to set out our response to the comments received in relation to the application and to summarise the applicant's case.

We have addressed each consultee response in turn below, to assist your consideration and to assist in the determination of this application. Where there been consultee responses that do not require a response, we have not addressed these as part of this letter. Where appropriate, consultee comments have been repeated verbatim to avoid misinterpretation.

Annex 1 of this letter details the documents that have been submitted alongside this letter and identifies the documents they are to supersede.

URBAN DESIGN

The consultee response from SBC's urban design officer were received on the 26th September 2024. The table below sets out the comments received and the applicants response in turn.

Response to Urban Design Consultee Comments

Urban Design Response	Applicant Response
Layout	
Please provide details on the construction details and timing of the resurfacing of the bridleway.	Details regarding time of resurfacing the bridleway are set out on page 28 of the *Character Area Design Code: Marston Gate and Nightingale Corner.*

The Pinnacle
20 Tudor Road
Reading
RG1 1NH
turley.co.uk

Registered in England Turley Associates Limited no. 2235387. Registered office: 6 Atherton Street, Manchester M3 3GS

	The applicant would be agreeable to inclusion of a condition that covers construction details if required.
Please provide evidence to demonstrate that the footpath link to Rowborough from the north-east will be appropriately surfaced and be to the edge of the red line boundary.	Details of the resurfacing of this link would be addressed in a separate RMA dealing with the wider POS and as such is not a matter for this application.
There are existing drainage ditches and hedgerows running along Old Vicarage Lane, please provide clarification what is proposed for these.	Hedgerows to be retained, with identified breaks to facilitate development. A plan (ref. 20933 52-01) has been submitted alongside this letter which identifies proposed works to the ditches and hedgerows.
Policy NP14 (Housing for the elderly) of the South Marston Neighbourhood Plan (SMNP) encourages housing for the elderly to be located close to the local centre. Please could you outline how the proposed development meets this policy.	This site forms part of the wider Swindon NEV allocation where older persons accommodation will be delivered elsewhere within the allocation. The local centre is not to be delivered as part of this phase.
The parking for Plot 131 appears awkward and is likely to result in the occupant not utilising both spaces and parking on the road. Please can this arrangement be reviewed.	The parking for plot 131 has been updated on the latest plan submitted.
Boundary Treatments	
Plots 45/46; 77/78; 79/80; 128/129 – timber fence at end of drive should be replaced by wall.	This has been amended as part of the updated layout.
Plots 22 and 29 – within parking court - replace timber fence with wall.	This has been amended as part of the updated layout.
Plots 39-44 and 36-18 – replace wood post fencing with estate railing.	Estate railing has been included.
Plots 18-28 – include estate railing so not reliant on hedge	Estate railing has been included.
Please could you confirm the intention for any boundary treatment along the north-east of the site, adjacent to the fields separating South Marston and Rowborough	Estate railing will be incorporated as boundary treatment along the north-east of the site.
Materials	
The streetscenes suggest the use of brick detailing, which is welcomed. Please could you clarify if and where this is listed on the elevation plans? For the relevant plots it would be helpful if brick detailing could be referenced in the 'Primary Material' box.	The latest plans submitted alongside this letter have made this clearer.
To ensure the proposed character is achieved, Officers suggest additional chimneys are included at plots: 1, 44, 45, 71, 97, 110, 113, 129.	All plots identified in the comments have had additional chimneys included apart from plot 1.

	As Plot 1 will be a show home, these typically need to be constructed at pace. Installation of chimneys delays construction due to availability of materials required and the need for a crane on site.
Officer's request samples of the proposed materials, including the tones of mortar proposed. This could be during the course of the application or controlled via condition.	The applicant has requested that material details are secured via a suitably worded condition.
Amenity	
The Planning Statement states - *4.13 The majority of plots accord with the Council's requirements in respect of back-to-back and back-to-side distances. There are however 4 instances where a minor deviation from standard is shown in back-to-back distances and 2 instances in respect of back-to side distances.* Please could you advise which plots this refers to?	Plot 18 / Plot 19 – 10m back to side distance Plot 112 / Plot 114 – 10.1m back to side distance Plot 6-8 / Plot 15-16 – 17.5m back to back distance Plot 91/92 / Plot 101 – 19m back to back distance Plot 94 / Plot 99 – 17.2m back to back distance Plot 123 / Plot 132 – 16.9m back to back distance

ECOLOGY

The response from the ecology officer was received on the 30th September 2024. The response requested further specific details in relation to ecological enhancements, specifically the number of bat and bird boxes, their type, (including proposed target species) and (tree) locations and orientations.

The response also queried whether there would be any specific additional enhancements in relation to amphibians and reptiles.

The response requested a commitment statement that any management company utilises the expertise of a Suitably Qualified Ecologist ('SQE') for the site long-term, in order to help deliver, maintain and monitor the ecological receptors and wider ecological and landscape proposals as set out in the LEAMP and FLEAMP (agreed as part of S/COND/22/0316).

In response to the above comments, an updated LEAMP (prepared by FCPR) has been submitted alongside this letter.

LANDSCAPE

Following receipt of the Council's initial landscape comments (dated 3rd September 2024), a meeting was held on the 17th September between the landscape officer and the applicant team to discuss the comments in detail. A further meeting was held with the applicant's landscape architect and the landscape officer, and a strategy has been agreed. The applicant's response to the landscape comments is set out in the table below.

Response to Landscape Consultee Comments

Landscape Response	Applicant Response
In terms of the planting scheme, I find it frustrating to have to refer back to Sheet 01 to	Abbreviations have been added to each sheet, as well as sizes.

find out what the various abbreviations and sizes are. I suggest that the abbreviation list is on every sheet and all tree sizes are given on every tree label. It would also be helpful if a planting masterplan was included.	GL Studio have provided a general arrangement plan, which shows the scheme as a whole and will therefore have not provided a planting masterplan.
Referring back to my original comments (point 7), I still consider that the broad tree planting schedule to be unacceptable in that of the 111 trees across the whole site and over 7 sheets, very few are what I would consider to be a 'larger tree' in terms of species. It is important that sufficient space is allowed for appropriately large trees within the scheme. There are locations where there is room for a much larger tree, but the scheme shows two smaller ones instead. For example, outside units 82-86, there is room for larger avenue trees, but Betula nigra are specified. Old Vicarage Lane should become a key avenue with appropriately large trees. I am pleased to see a better spread of sizes in the schedule.	The was discussed during the meeting between the Council's landscape officer and GL Studio. The layout has been reviewed to include additional trees, species sizes are subject to the design code and space available.
I consider that the tree planting strategy should also work more closely with the existing trees. For example, there is opportunity adj units 82, 91 and 101 to have new tree planting (of an appropriate stature / species) in between the existing, yet they appear to not have any relationship with each other.	This was discussed during the meeting between the applicant's landscape consultant and the Council's landscape officer, and a strategy was agreed which is reflected in the revised submission.
By unit 103 the retained hedge is shown over the proposed footpath?	This has been amended as part of the latest plans.
I acknowledge that I disliked the very 'fussy' arrangement of shrub planting (my previous point 1) but this now appears to have gone to the other extreme and the whole scheme is a sweep of 3 planting mixes.	This was discussed during the 2nd meeting (between the applicant's landscape consultant and the Council's landscape officer) and a planting strategy was agreed. GL Studio have updated the plans to reflect the agreed position.
I have been consistently critical of this as an approach in the past as it is generally unsightly (in my opinion), leaves the actual choice of what plants go where to someone other than the designer and makes it therefore impossible for the LPA to inspect the works on completion as there is no actual finalised design to judge. I am also not a supporter of using (or mixing) herbaceous perennial plants with grass species and 'normal' shrubs as they all require differing treatment and much higher levels of maintenance.	As above, this has been discussed and strategy agreed going forward.

Herbaceous perennials will appear dead for long periods of time as will the various grasses. I do not see this as an appropriate vision for the entirety of the estate, accepting there are different 'mixes', but the point is the same. The overall scheme will only look at its best for a proportion of the year. Whilst it might be fine to use the various species, I would rather see them as broader swathes of single species. This was the thrust of my point 1.	As above, this has been discussed and strategy agreed going forward which is reflected in the revised submission. Herbaceous plants and grasses have been specifically included to comply to the design code.
Most importantly, the management plan states, at 2.1, that the management for all these 'on plot' areas of planting will be the responsibility of the house / plot owner. It is important to note that in the vast majority of cases, all front gardens are completely covered with these mixes and no areas of normal amenity / mown grass.	This was discussed during the meeting and agreed that this is a standard condition. No further action required for the management plan. Use of grass vs. planting discussed during 2nd meeting and strategy going forward agreed. Plans will be updated to reflect this.
Given the issues I note above, I would be most concerned that the management is left to so many individuals and would be happier to see some areas of amenity grass and a more 'normal' planting scheme for each 'front garden'. I assume that the difference between the 'ornamental plot mix' (OMP) and the 'ornamental mix' (OM) is that the OMP is maintained by the plot owner? – what happens then in a lot of instances where there is an OMP and an OM adjacent to the same plot and side by side, but they the responsibility of different bodies ? – the front of plots 59 and 60 as an example ?	This was discussed during the meeting and agreed that this is a standard condition. No further action required for the management plan.
The LPA will require that all plants that die are to be replaced for at least 5 years from the date of implementation and I think this design therefore places a very heavy burden on the house owner.	This was discussed during the meeting and agreed that this is a standard condition. No further action required for the management plan.
The Landscape Specification is broadly acceptable, but I have some significant issues with the Landscape Management Plan. The establishment and longer-term management of the complicated mixes as noted above are not covered in enough detail in these documents. Whilst I am asking that these are changed anyway, the documents as submitted would not give enough information to the householder who is supposed to be responsible for the maintenance of this scheme or large parts of it.	This was discussed during the meeting. Document sets out the management objectives and is generally only used by the management company (a note has been added to clarify this), this document is not intended to be a homeowner's manual. The mixes are covered under section 10.
In more detail I think would be useful to give more information around the definition of plants to be replaced. At 3.4. of the LMP it says 'Plant failure is as defined in 4.1' but then 4.1 does not actually	GL Studio have provided further detail as part of this submission.

define what that might be in terms of plant health. I appreciate that this is a very fine and perhaps pedantic point, but it is an important one when the project Landscape Architect and Contractor are preparing a list of plants to be replaced.	
Point 4.1 notes that plants are to be in line with the intended design, but I suggest it would be better to define some form of physical condition, or lack thereof, in order to simplify the discussion.	Physical condition of the plants is included in the planting schedule on the approved drawings, with further information in the specification. Having the information in 2 separate locations allows more space for discussion and error.
I would also expect to read about the specification for any replacement planting i.e. that they must be the exact same as the original with, perhaps the exception of where larger groups of plants have died (or not established successfully) and it might be worth considering replacing them with a different species that has, for example, shown that they will survive / thrive on the same site. Both points should be dealt with in both documents. In terms of tree replacements, it would also be worth pointing out that the replacement staking needs to also match the original.	This is covered in the management plan, and referred to in the specification. As above, having information in 2 locations creates space for discussion and error. The specification states that planting can be replaced if unobtainable, but would need to be approved by the LPA.
Climbing plants are a good idea, but I only see 6 plants across the whole site. It would be good to have more of these in other locations.	This was discussed during the meeting and strategy on additional climbers agreed and reflected in revised submission.

HIGHWAYS

Following receipt of the Council's initial highways comments on the 30th August 2024, updated plans were issued to the Council on the 5th September 2024 for consideration and in response to the comments. An updated response is awaited from the highways team. Following amendments to the layout, a further set of updated plans have been submitted alongside this letter. These plans will supersede those submitted on the 5th September. Details of the plans are set out at Annex 1 of this letter.

LEAD LOCAL FLOOD AUTHORITY

The Lead Local Flood Authority comments were received on the 18th September 2024 and additional information was requested as part of the comments. The additional information requested has been submitted alongside this letter and is considered to satisfy the LLFA request.

ARBORICULTURE

The Council's response in relation to arboriculture was received on the 23rd September 2024. The comments are set out in the table below alongside the applicant's response to each comment in turn. Alongside this letter, the tree assessment for the outline application has been submitted as this covers the R8 / R9 parcel.

Response to Arboriculture Consultee Comments

Arboriculture Response	Applicant Response
The Oak to the east of plot 4 is shown as retained on the landscape drawings but has been omitted from the S38 and road geometry drawings. The engineering drawings need to show the position of the tree in relation to the highway works. The layout is likely to have an impact on some of the protected trees, notably the Oaks adjacent to Old Vicarage Lane, due to the proximity of development and proposed highway works. I previously raised this issue and also requested that the reserved matters application include a tree survey and assessment of the arboricultural implications, to accord with BS5837:2012. Despite advising that this is necessary, to assist in the assessment of the application, no specific arboricultural reports have been submitted for consideration.	The Tree Survey prepared for the outline application (which cover R8/R9) has been submitted alongside this letter. The applicant will be instructing a further survey and assessment is undertaken just for Parcels R8 and R9 which will be submitted under a separate cover.
It is noted that the planning layout shows an indicative root protection area (RPA) around the trees, but it is apparent that the constraint of the existing road on the rooting systems has not been considered. A tree constraints plan needs to be submitted which adheres to the formula set out in the British Standard for accurate depiction of a remodelled RPA. Only then will it be possible to assess the potential impacts on the existing trees from plot 1 and the access road created for plots 1-5.	The Tree Survey prepared for the outline application has been submitted alongside this letter. The applicant will be instructing a tree constraint plan to be prepared just for Parcels R8 and R9 which will be submitted under a separate cover.
I previously commented on the dearth of species within the proposed landscape scheme that could be classed as long lived. Whilst there have been some changes within the plant schedule, the revised schedule retains many species that offer only a very domesticated scale of size at maturity. As previously, I acknowledge that the confines of space within the parcels area dictates the species choice, but there are areas that should be prioritised for inclusion with larger species at maturity. The character of Old Vicarage Lane is hedgerow-lined with existing intermittent Oaks and, by opting for hybridised or smaller urban species to be included adjacent to the road, this character will be irrevocably diminished. There is widespread use of Hornbeam, which could readily be substituted, along with the heavy inclusion of hybridised Rowan	The species proposed have been agreed with the Council's landscape officer.

where the selected use of Oaks should be prioritised.	

SOUTH MARSTON PARISH COUNCIL

The consultee response from South Marston Parish Council was received on the 18th September 2024. The table below sets out the comments received and the applicant's response in turn.

Response to Parish Council Consultee Comments

Parish Council Response	Applicant Response
Utilities Infrastructure	
The SBC Highways response to early versions of Reserved Matters concerning delivery of the Haul Road/Primary Street noted that delivery of the Haul Road should consider installing appropriate ducting under the road for utilities to avoid being dug up at a later date. There is no such provision for utilities infrastructure on the current Primary Street application S/RES/24/1020. Since parcels R6 and R7 straddle the Primary Street, preparation for utilities delivery must be taken into account. Also, the lack of an overall strategy for utilities means there is as yet no provision or even mention in the R8 application for tackling the replacement of the existing mains water pipe currently serving all dwellings on Manor Farm which runs through parcel R8.	Ward Williams met with the local residents on site recently. Ward Williams are drawing up a location plan and will access options. The water main will need to be diverted as it is currently running through the development (east to West).
There is also no information on how and when the existing water supply pipe to the Manor Farm housing, that runs through R8, will be replaced. In fact, its existence isn't noted anywhere in the application. We would expect to see a statement of measures to ensure a significant number of existing houses do not have interruptions to their water supply	A resident has paid to start the process of getting water to his renovation works he is completing at Manor Farm, he has mentioned if TW were to complete the dig they can divert the water pipe in our first phase into his agreed route with Thames.
There is a lack of clarity about extent of undergrounding of overhead cabling (power/telephone lines cross the red line). There should be a statement of principle at the very least in this application concerning of what happens to overhead wires outside the red line since detailed plans for the surrounding green infrastructure are only anticipated at 95% occupation of the build phase.	Matters relating to infrastructure outside the red line of this application are not considered to be required as part of this submission. The principle of development for this site and the wider NEV site have been established through the outline permission. This application is coming forward in conformity with the phasing plan for the site.
Slab Levels	

There is a plan of slab levels, as we requested, but it does not provide the overview we needed about coping with the fall of land north to south from Magdalene Close, across Bridleway 4 to parcel R8. The only cross section that is supplied is to the western end where there is less of a significant drop in land level. We would like to see the cross-section at the eastern access point from R8 onto the bridleway. Our concern is that, unless the levels are appropriate, Bridleway 4 will be underwater for a considerable length – this is inconsistent with its now acknowledged role as a key cycle/pedestrian route. *Close to this location, there is an indication of a surface water drain within the housing development. We would like to see a comprehensive system to prevent standing water on this stretch of Bridleway 4.*	A plan has been submitted alongside this letter which provides details responding to these comments (ref. 20933 53-01).
Parking	
We are happy with the overall layout of parking but concerned about the overall amount available and would ask that Borough Officers check that it is judged adequate in the light of the above. We believe R8 & R9 collectively fail to meet the requirements for visitor parking under the CADC-1 requirement of one visitor space for every four dwellings.	9 additional visitors spaces have been added as part of the latest layout (Rev F).
Pedestrian and Cycleways	
Phasing Plan (approved Aug 2023) page 17 and CADC-1 Movement Sequencing (approved August 2024) states that footpaths and cycleways in the strategic open space between housing parcels do not need to be delivered until 95% occupancy of the relevant Phase. Regardless of the interpretation of 'phase', the result is that the vast majority of occupants in Phase 1 will have not have access to any safe pedestrian and cycle routes into or out of the expanded village for several years.	The applicant has advised that they typically open footways and cycleways as early as possible where safe to do so as this brings benefit to both customers and the wider community. However, in some instances, it is unsafe to provide and open certain footpaths and cycleways due to ongoing construction activity. Health and safety is paramount to the applicant and they advise they will work in accordance with the approved details forming this application.
The provision of 'Carpenter's' Walk has resolved the difficulties in safe access to school and Village Centre. However, the Primary Street crossing needs to be aligned with its southerly exit point if it is to provide a link to the Primary Street footpath/cycleway. Please also ensure that the exits on to Bridleway 4 are surfaced and on desire lines	The connections align with those in Magdalene Close. The applicant will liaise with the planning officer regarding these comments.

as far as possible to match the accesses through Magdalene Close.	
It remains the case, though, that R8 and 9 will, according to the agreed Phasing Plan, have no safe cycle access out of the village (acknowledged to be a key sustainability factor) until at least 95% of the whole build phase is occupied. *Even then, there are only two potential off-road cycleway routes that could be provided:* *o The Primary Street cycleway, which leads only to the railway footbridge with no guarantee that the ramps or link to the A420 on third party land will be delivered even after 300 houses are occupied. Note the Primary Street approach to Thornhill Road will not carry an adjacent cycleway.* *o The Bridleway 4 route to Morses Lane, where the junction with Thornhill Rd was deemed 'unsafe', but could be improved via the separately planned SBC traffic calming initiative and reduced speed limit. Note the resurfacing of the bridleway is only proposed to the western end of parcel R8.* *Note For R8, Old Vicarage Lane is not a safe cycle or walking route as it has no roadside footway so dwellings fronting OVL do not have safe routes. The Carpenters Arms bridge at the A420 junction has been judged by SBC Highways Officers as not suitable for walkers or cyclists.* *We need the Borough and the developers to tell us just what is the appropriate safe route for cyclists out of the village for the first 300 occupiers of Phase 1 South Marston.*	Please see previous comment regarding opening of footways and cycleways. A 3m shared cycleway runs through the centre of SW parcel, linking South Marston, Magdalene Close to Primary Street where cycle connectivity continues. Additionally, a 3m connection along the SW edge named 'Carpenters Walk' facilitates further cycle connectivity between South Marston and the new development. The design is compliant with the approved Design Codes and the Outline Approval.
Green Infrastructure and Landscape	
We note in the Landscape Management Plan (and potential in other documents making up this Reserved Matters Application), that management company arrangements are proposed for the long term maintenance of green infrastructure. Para 2.2 reads 'Any areas of public realm and public open space within the site boundary will be the responsibility of Taylor Wimpey Oxfordshire and their appointed management company until such time where a resident run and/or social housing management company is set up and the responsibility is handed over.'	The applicant is in discussions regarding the management of the green infrastructure within the site.

This is not consistent with productive negotiations currently in progress with Taylor Wimpey concerning the adoption of green infrastructure by South Marston Parish Council. *We request that the word 'Maintenance' is substituted for 'Management' in the second line and after 'time where' the replacement wording 'South Marston Parish Council agree to take on management responsibility' is used.*	
Conditions concerning retention of hedgerows should be reflected in sales documentation agreed to by occupiers where appropriate.	This is noted by the applicant.

HOUSING

The response from the Council's housing officer was received on 11th September 2024 and requested further information regarding the size of the bedrooms for the affordable housing units before detailed comments could be made. This information was provided to the officer on the 13th September 2024.

It is understood from an email from Sally Nelson (dated 8th October 2024) that the housing team have no further comments to make as part of the application.

SUMMARY

On the basis of the above, it is considered that the responses provided within this letter appropriately address consultee comments where required. We understand there are outstanding consultee comments due to be received, but we trust that the information as set out above provides clear responses to the comments received so far. However, if you do have any questions please let me know.

Yours Sincerely

Emily Rickard
Planner
Emily.rickard@turley.co.uk
