1	Highway users on Old Vicarage Lane (Viewpoint 1)	Low	Low	Adjacent	Partial		Medium (construction) Medium-Low (year 1) Low (year 15)	Viewpoint 1 is representative view for highway users. They experience transient close range views of the site and Old Vicarage Lane. Open close range views of the development's GI would be observed. New built development (housing) would be largely be obscured by the intervening GI, although views of new housing would be gained as receptors move northward. Transient and close range views of the proposed new access arrangement would also be observed, albeit users would experience this within an existing highway context. It is considered that the overall experience for highway users would not be significantly affected such that it would lead to any significant long term harm.	Moderate-Minor Adverse	Minor Adverse Negligible	Negligible
2	Users of Public Footpath (Viewpoint 2)	High	Medium	Within site	Partial		Medium (construction) Medium -Low (year 1) Low (year 15)	View from the Public Footpath. Viewpoint 2 provides an example. Open close range views of the site's agricultural fields are afforded with views of industrial buildings on skyline and nearby passing trains. Users would experience views of the proposed GI in the foreground with new built development (housing) beyond. Whilst there would be a clear change and impact in the experience, users would be able to continue to walk through the countryside within an extensive area of GI of grassland and woodland habitats. Once established, tree cover would 'soften' and filter views of the built form. The experience would be a pleasant- albeit a very different one than currently exists. It is considered that the proposed development would not would lead to any significant long term harm on these receptors.	Moderate Adverse	Minor Adverse	Minor Adverse Negligible
3	Users of Public Bridleway (Viewpoint 3)	High	Medium	Within site	Partial-Full		High-Medium (construction) High-Medium (year 1) Medium (year 15)	Viewpoint 3 provides a representative view from the Bridleway. Open close range views of the site are afforded. Users would experience close range views of the proposed built development (housing, primary school, mixed use local centre and primary street). There would be a clear change in the experience from agricultural use to built development . The Bridleway would be retained and located within a 'green corridor' with new planting, once established, filtering and 'softening' views of the built form. The experience for users would be pleasant- albeit very different from the current situation. it is considered that views of a high-quality development would not be	Major-Moderate Adverse	Moderate Adverse	Minor Adverse

[1] Based on FPCR Methodology.

VISUAL EFFECTS TABLE (VET)[1]											
Ref	**Receptor Type** **Location, and Representative Viewpoints**	**Judged Sensitivity of Visual Receptor**		**Judged Magnitude of Visual Effects**				**Commentary**	**Overall Significance of Effect on receptors at Construction Phase**	**Overall Significance of Effect on receptors upon completion**	**Overall Significance of Effect on receptors 15 years post completion**
		Susceptibility to Change	**Value of Views**	**Distance from Application Boundary (approx. m/km)**	**View of proposed development**		**Size/Scale of Visual Change/Effect (including degree of contrast/integration) at Stages of Project**		**Major** **Moderate** **Minor** **Negligible** **None** **Adverse** **Beneficial**	**Major** **Moderate** **Minor** **Negligible** **None** **Adverse** **Beneficial**	**Major** **Moderate** **Minor** **Negligible** **None** **Adverse** **Beneficial**

								intrinsically harmful and that the proposed development would not would lead to any significant long term harm on these receptors.			
4	Residents on Old Vicarage Lane (Viewpoint 4)	High	Medium	Adjacent	Partial-Full		High-Medium (construction) Medium (year 1) Low (year 15)	Viewpoint 4 provide a representative view for residents on Old Vicarage Lane. Close range views are afforded of the site, together with first floor views of buildings in South Marston. Views would be afforded of the adjacent GI near Old Vicarage Lane with views of new built development (housing) beyond Old Vicarage Lane. A comparatively small number of receptors (six properties) would be directly impacted. It is considered that effects would diminish in the longer term on account of maturing planting which would provide some filtering and 'softening' of the view of built development.	Major-Moderate Adverse	Moderate Adverse	Minor Adverse
5	Users of Public Bridleway (Viewpoint 5)	High	Medium	Adjacent	Partial-Full		High-Medium (construction) High-Medium (year 1) Low (year 15)	Viewpoint 5 provides a representative view from the Bridleway. Open close range views of the site are afforded together with the residential edge of South Marston. The Bridleway is retained within the site. Users would experience close range and transient views of the proposed built development (housing). The experience for users would be pleasant- albeit very different from the current situation. It is considered that views of a high quality development would not be intrinsically harmful and that there would be no significant adverse impacts on the experience for bridleway users in the long term.	Major-Moderate Adverse	Moderate Adverse	Minor Adverse
6	Users of Public Footpath near South Marston Brook (Viewpoint 6-7)	High	Medium	Within site	Full-Partial		High-Medium (construction) High-Medium (year 1) Low (year 15)	Viewpoint 6 is a representative view from the Footpath near South Marston Brook. Open close range views of the site are afforded together with views of Rowborough Farm. Users would experience close range and transient views of the intervening GI (woodland and hedges) with the proposed built development (housing). The Footpath would be contained in a broad corridor of greenspace. The experience for users would be different, but it is considered that views of a high quality development would not lead to a significant adverse effect in the long term. The maturing GI would provide some filtering of the view of the built development in the longer term.	Major-Moderate Adverse	Moderate Adverse	Minor Adverse

VISUAL EFFECTS TABLE (VET)[1]											
Ref	**Receptor Type** **Location, and Representative Viewpoints**	**Judged Sensitivity of Visual Receptor**		**Judged Magnitude of Visual Effects**				**Commentary**	**Overall Significance of Effect on receptors at Construction Phase**	**Overall Significance of Effect on receptors upon completion**	**Overall Significance of Effect on receptors 15 years post completion**
		Susceptibility to Change	**Value of Views**	**Distance from Application Boundary (approx. m/km)**	**View of proposed development**		**Size/Scale of Visual Change/Effect (including degree of contrast/integration) at Stages of Project**		**Major** **Moderate** **Minor** **Negligible** **None** **Adverse** **Beneficial**	**Major** **Moderate** **Minor** **Negligible** **None** **Adverse** **Beneficial**	**Major** **Moderate** **Minor** **Negligible** **None** **Adverse** **Beneficial**

7	Users of Public Footpath near South Marston Brook (Viewpoint 6-7)	High	Medium	Within site	Full-Partial		High-Medium (construction) Medium (year 1) Low (year 15)	Viewpoint 7 is a representative view from Footpath near South Marston Brook, which is similar to Viewpoint 6. Open close range views of the site are afforded together with views of vegetation along the Brook. Users would experience close range and transient views of the GI and the proposed built development (housing). Retained vegetation along the Brook and a maturing GI would provide some filtering and some containment of the view of the built development. It is considered that views of a high quality development would not lead any unacceptable long term harm on these receptors.	Major- Moderate Adverse	Moderate Adverse	Minor Adverse
8	Highway Users on Nightingale Lane (Viewpoint 8)	Low	Low-Medium	Adjacent	Partial		High-Medium (construction) Medium (year 1) Low (year 15)	Transient views would be afforded for receptors on Nightingale Lane Vegetation on Nightingale Lane provides some filtering and limits the extent of visibility across the site. Close range fleeting views would be afforded of the built development (housing) filtered by existing and new vegetation. It is judged that new high quality residential development would not give rise to any unacceptable long term harm on these receptors. Receptors are judged to be of low sensitivity as are moving through the landscape and their existing experience includes views of residential properties in South Marston.	Moderate Adverse	Moderate-Minor Adverse	Minor Adverse
9	Highway Users on Nightingale Lane - eastern section) (Viewpoint 9)	Low	Low	Adjacent	Partial		High-Medium (construction) High -Medium (year 1) Low (year 15)	A break in the hedgeline provides open close range view of the northern part of the site together with views of Nightingale Wood. Close range fleeting views would be afforded of the built development (housing). These views would be over a short duration and receptors are judged to be of low sensitivity.	Moderate Adverse	Moderate Adverse	Minor Adverse
10	Users of Public Bridleway on the edge of Nightingale Wood (Viewpoints 10-12)	High-	Medium	Within site	Partial -Full		High-Medium (construction) High-Medium (year 1) Low (year 15)	Viewpoints 10-12 are representative views from Bridleway as receptors exit Nightingale Wood. Open close range views of the site's eastern edge are afforded, together with views of the edge of Nightingale Wood. The Bridleway would remain in situ and would be set within a green corridor that would include new planting. Users would experience close range views of proposed built development. Whilst there would be a level of change, the experience for users would be a pleasant albeit a very different experience from the current situation. It is considered that views of a high-quality development would not lead to a lead to any unacceptable long term harm on these receptors.	Major-Moderate Adverse	Moderate Adverse	Minor Adverse

VISUAL EFFECTS TABLE (VET)[1]											
Ref	**Receptor Type** **Location, and Representative Viewpoints**	**Judged Sensitivity of Visual Receptor**		**Judged Magnitude of Visual Effects**				**Commentary**	**Overall Significance of Effect on receptors at Construction Phase**	**Overall Significance of Effect on receptors upon completion**	**Overall Significance of Effect on receptors 15 years post completion**

11& 12	Users of Public Bridleway on the edge of Nightingale Wood, to include the Bridleway that heads south from Nightingale Wood to the A420 (Viewpoints 11-12)	High	Medium	Within site	Full		High-Medium (construction) High-Medium (year 1) Low (year 15)	Viewpoints 11-12 provide representative views from the Bridleway that crosses the site. Open close range views of the site's eastern area are afforded both from this Bridleway and the one that heads south towards the A420. Views are gained of the edge of Nightingale Wood and the industrial buildings to the west on the skyline. The Bridleways would remain in situ and would be set within a greenspace corridor as part of the GI framework . Users would experience close range views of proposed built development as well intervening GI which includes new planting. Whilst there would be a level of change, the experience for users would be pleasant albeit a very different experience than currently exists. It is considered that views of a high quality development would not lead to any unacceptable long term harm on these receptors.	Major-Moderate Adverse	Moderate Adverse	Minor Adverse
13	Users of Public Footpath west of Sevor Farm (Viewpoint 13)	High	Medium	300m	Glimpsed -None		Low (construction) Low –Negligible (year 1) Negligible (year 15)	Viewpoint 13 is a representative view. Transient views are gained from the Footpath of the local agricultural landscape. The site is effectively obscured by intervening hedgerows, trees and landform. There are views of buildings in South Marston albeit these are filtered by hedges and tree cover. Views of the proposed development would be glimpsed and seen within the context of buildings at South Marston. There would be no marked change in the experience for receptors and they would not be adversely affected to any significant degree.	Minor Adverse/ Negligible	Negligible	Negligible
14& 15	Residents at Rawling Close –Bell Gardens and Users of Public Footpath. (Viewpoints 14-15)	High	Medium	Adjacent	Partial -Full	,	Medium (construction) Low-Medium (year 1) Low (year 15)	Viewpoints 14-15 are representative views for residents and Footpath users. Depending on location, close range views are afforded of the northern parts of the site together with views of the existing primary school. Views of the GI would be afforded, together with views of some new housing adjacent to Ash Gardens. The 'open' character of the field behind the houses at Bell Gardens and Rawlings Close would remain and there would be a setback/landscape 'buffer' between existing properties and new built development (housing). Planting as part of the GI framework would provide some filtering and 'softening' of the built form	Moderate –Minor Adverse	Moderate-Minor Adverse	Minor Adverse Negligible

VISUAL EFFECTS TABLE (VET)[1]											
Ref	**Receptor Type** **Location, and Representative Viewpoints**	**Judged Sensitivity of Visual Receptor**		**Judged Magnitude of Visual Effects**				**Commentary**	**Overall Significance of Effect on receptors at Construction Phase**	**Overall Significance of Effect on receptors upon completion**	**Overall Significance of Effect on receptors 15 years post completion**
		Susceptibility to Change	**Value of Views**	**Distance from Application Boundary (approx. m/km)**	**View of proposed development**		**Size/Scale of Visual Change/Effect (including degree of contrast/integration) at Stages of Project**		**Major** **Moderate** **Minor** **Negligible** **None** **Adverse** **Beneficial**	**Major** **Moderate** **Minor** **Negligible** **None** **Adverse** **Beneficial**	**Major** **Moderate** **Minor** **Negligible** **None** **Adverse** **Beneficial**

16	Residents at Manor Farm and Users of Public Bridleway (Viewpoint 16)	High	Medium	Within site	Partial-Full		Medium (construction) Low-Medium (year 1) Low (year 15)	Viewpoint 16 is a representative views for residents and Footpath users at this location. Close range views are afforded of the northern parts of the site, together with views of the residential edge of South Marston and the upper parts of buildings at Thornhill Road industrial estate. Existing mature tree cover (north of Manor Farm), provides some screening and filtering effects. Views would be afforded of the GI and the new built development (housing) although existing vegetation and a maturing GI would provide, to varying degrees, some filtering and 'softening' of the built development. Views of the built development would be observed as part of the backdrop of residential/industrial buildings on the edge of South Marston.	Moderate Adverse	Moderate –Minor Adverse	Minor Adverse
17	Users of Public Footpath near Ash Gardens (Viewpoint 17)	High-	High-	Within site	Partial-Full		Medium construction) Low-Medium (year 1) Low (year 15)	Viewpoint 17 is a representative view for footpath users. Views are afforded of the field behind Rawlings Gardens and Bell Gardens, as well as the properties themselves. Close range views would be afforded of the new built development (housing) and the GI. Views of the built development would be observed within the context of the existing backdrop of modern residential properties that are apparent in the view. It is judged that the experience for receptors would not be adversely affected to any significant degree as they already afford views of the residential edge of South Marston and new housing would be observed within that context.	Moderate Adverse	Moderate-Minor Adverse	Negligible
18	Highway Users on Thornhill Road (Viewpoint 18)	Low	Low	100m	Glimpsed		Low (construction) Low (year 1) Low-None (year 15)	Visibility into the site is heavily restricted by the intervening built form and by hedge/tree cover along Thornhill Road. Fleeting views would be afforded of the proposed new access arrangement. This would be observed within an existing highway context that includes nearby roundabouts, main roads, and employment buildings (e.g. Keypoint interchange),. Highway users are of low sensitivity and they are passing through the landscape at speed. It is judged there would be no significant adverse effects upon these receptors.	Minor Adverse-Negligible	Negligible	Negligible
19	Highway Users On A420 (Viewpoint 19)	Low	Low	200m	Glimpsed		Low -None (construction) Low (year 1) Low –None (year 15)	View for highway users. Visibility into the site is restricted by intervening hedges and trees. Users experience views of the buildings along the A420, whilst their main focus is the highway corridor itself and activity along it. Highway users are of low sensitivity and they are passing through the landscape at speed. The southern part of the site includes an extensive area	Minor Adverse Negligible	Negligible	Negligible

VISUAL EFFECTS TABLE (VET)[1]											
Ref	**Receptor Type** **Location, and Representative Viewpoints**	**Judged Sensitivity of Visual Receptor**		**Judged Magnitude of Visual Effects**				**Commentary**	**Overall Significance of Effect on receptors at Construction Phase**	**Overall Significance of Effect on receptors upon completion**	**Overall Significance of Effect on receptors 15 years post completion**

								of GI which would include woodland and tree cover. Views of the built development would be contained by this GI framework and by existing features within the local landscape.			
20	View from AONB Near Bodyhorse Hill (Viewpoint 20)	High	Medium	4.4km	Glimpsed		Negligible -None (construction) Negligible-None (year 1) Negligible- None (year 15)	This is vantage point from the edge of the AONB. There are some elevated vantage points from the escarpment that provide opportunities for long ranging views across the wider landscape of the Upper Thames Clay Vale and Midvale Ridge. The extensive urban area of Swindon is visible and is a noticeable feature within the valley. The proposed development would be around 4km away and would be distant and seen within the context of the urban area of Swindon. Hedgelines and trees within the valley add a further layer of filtering that would be further strengthened by new planting around the perimeter of the site. With the development in place, receptors would continue to experience long ranging panoramic views across the valley and the proposed development would be observed as a relatively minor component of the much wider view which includes the built-up area of Swindon in which it would be experienced. It is considered that the Proposed Development would not give rise to any significant adverse impacts on visual receptors within the AONB.	Negligible	Negligible-None	Negligible-None
21	Highway Users Wanborough Road (Viewpoint 21)	Low	Low	1.5km	Glimpsed-None		Low-None (construction) None (year 1) None (year 15)	Viewpoint 21 is an elevated vantage point with highway users affording transient views of the urban/industrial edge of Swindon to include the Keypoint interchange. Views of the site are largely obscured by intervening hedges and trees as well as the existing built form on the edge of Swindon. View of the proposed development would be difficult to percept.	Negligible	None	None
22	Users of Thornhill Road (Viewpoint 22)	Low	Low	200m	None		None (construction) None (year 1) None (year 15)	No views of the site are afforded for highway users. Thornhill Road Industrial Estate and tree cover effectively screen views of the site.	None	None	None
23	Users of Public Bridleway near Manor Farm (Viewpoint 23)	High-Medium	High-Medium	Within site	Partial		High-Medium (construction) Medium (year 1) Medium-Low (year 15)	Viewpoint 23 is a representative view for Bridleway users. Views are afforded of the western and north western part of site to include fields and surrounding tree cover, with filtered views of industrial buildings at Thornhill Road. The Bridleway would be retained and is located within a broad area of	Moderate –Minor Adverse	Minor Adverse	Minor Adverse Negligible

VISUAL EFFECTS TABLE (VET)[1]											
Ref	**Receptor Type** **Location, and Representative Viewpoints**	**Judged Sensitivity of Visual Receptor**		**Judged Magnitude of Visual Effects**				**Commentary**	**Overall Significance of Effect on receptors at Construction Phase**	**Overall Significance of Effect on receptors upon completion**	**Overall Significance of Effect on receptors 15 years post completion**
		Susceptibility to Change	**Value of Views**	**Distance from Application Boundary (approx. m/km)**	**View of proposed development**		**Size/Scale of Visual Change/Effect (including degree of contrast/integration) at Stages of Project**		**Major** **Moderate** **Minor** **Negligible** **None** **Adverse** **Beneficial**	**Major** **Moderate** **Minor** **Negligible** **None** **Adverse** **Beneficial**	**Major** **Moderate** **Minor** **Negligible** **None** **Adverse** **Beneficial**
		High **Medium** **Low**	**High** **Medium** **Low**		**Full** **Partial** **Glimpsed** **None**		**High** **Medium** **Low** **Negligible/None**				
								greenspace. Close range views of the proposed development's primary street would be observed as well as the proposed GI of woodland, hedges and trees. Whilst there would be a level of change, the experience for users would be pleasant albeit a very different experience from their current situation. It is considered that views of a high-quality development would not lead to any unacceptable long term harm on these receptors.			
24	Users of Public Footpath near South Marston Farm (Viewpoint 24)	High (Residents) High-Medium (Footpath Users)	High-Medium	Adjacent	Partial-Minimal		High -Medium (construction) Medium (year 1) Low (year 15)	Viewpoint 24 is representative view for residents and Footpath users at this location. To some degree intervening hedges and tree cover restrict visibility into and across the site. Some views would be afforded of the new built development (housing) together with views of the GI (woodland, hedges and grassland). A broad landscape buffer/setback is established on the southern edge of the site and a maturing GI would assist in filtering and 'softening' the view of built development. Whilst there would be a level of change. It is considered that views of a high-quality development would not lead to a significant adverse impact so as to lead to any unacceptable harm on these receptors in the long term.	Moderate-Minor Adverse	Minor Adverse	Minor Adverse Negligible
25	Users of Highworth Road (Viewpoint 25)	Low	Low	2km	None		None (construction) None (year 1) None (year 15)	A slightly elevated section of the road provides distant and long ranging views to the south. Glimpsed views of industrial buildings to the north of South Marston are observed. No views are afforded of the site on account of the combination of intervening hedges and trees and the built form of South Marston. Views of the proposed development would be difficult to distinguish as a result of these features.	Negligible -None	None	None

NB:
None of the effects are judged to be reversible.
