Transport Development Management

Memo

To: Planning Services
From: Transport Development Management
Date: 4th July 2022

Application Number: S/COND/22/0031

Proposal: Discharge of condition 8 (Strategic Design Code) from Outline Planning Permission S/OUT/13/1555.

Location: Land North Of A420 Eastern Villages

Ed,

Condition 8:
Prior to the submission of the first reserved matters a Strategic Design Code shall have been submitted to and approved in writing by the Local Planning Authority. The Strategic Design Code shall:
a) Develop the vision, design concept, principles and frameworks described in the Design and Access Statement (February 2017);
b) Identify the character areas across the site, including the design approach, character area identity and public realm;
c) Explain how the design principles for the character areas including the local centres will be applied and co-ordinated across the site;
d) Principles to identify how a net biodiversity gain will been achieved across the site; and,
e) Set out landscape principles to ensure the green infrastructure framework (including open space) will make a positive contribution to the public realm, SuDS, movement network, the amenity of residential areas and the reduction of pollution.
Thereafter the reserved matters submissions for each phase shall demonstrate how the development

The Strategic Coding Plan: Walking and Cycling (pages 76 & 77) - the inclusion of a 5m segregated footway and cycleway adjacent to the majority of the Primary Streets is welcomed. These are now extended to link with the Green Bridge, existing and new underpasses. This represents a good provision through the site and good provision linking to facilities/destinations outside the site.

Page 78 refers to a walking route along the Primary Street and not the option of Morses Lane as discussed.

Page 79 – The precedent photographs need to be clear that these are precedents through the open space for leisure paths. The gravel will need a degree of compaction to be suitable for vulnerable users and cyclists.

Page 81 – Due to the height difference between the route and the swale, mitigation to prevent falls may be required, depending on the depth of the swale. The designer would need to risk assess and propose mitigation where required. Provision of a minimum 0.5m wide berm, with a shallow swale, should absolve fall risk.

Page 83 – footway/footpath. Here and throughout the document the two words are used interchangeably. In legislation the two words mean different things, this needs to be applied correctly, or an alternative word, such a walkway, used.

Page 86, p 6.6.5 – What is meant by ‘most homes’? A 400m isochrome as a 5 minutes walking distance is ‘as the crow flies’. A 300m isochrome is a realistic 5 minute walking distance. The interim bus stop locations on page 87 are welcomed. If appropriate the turning heads should be illustrated with the phasing strategy.

Page 90 & 91 – Rural Street, see comment at page 78. Appreciate there are other locations for rural elements of the Primary Streets.

Page 94 – The tree planting detail reflects the soil volume outside of the angle of repose. Page 95 reflect the lamp column offset. Both items are welcomed, subject to detailed design.

Page 106, p6.13.2, first bullet point: see comment for page 78.

Page 117 – What is a semi-private drive? Access will need to be provided in a manner fit for purpose. On a practical note, residents can carry bins 30m, an RCV needs to be able to get within 10m of a bin collection point. Fire Tenders will also need access to each dwelling.

Page 129 – The road providing access to the Primary School will need to include a School Safe Environment Zone, complete with Zig-Zag markings and Wig Wags. As mentioned on page 138.

Please note that the comments made here represent Officer Opinion and cannot be seen to prejudice Swindon Borough Council's formal determination in relation to any application or planning matter.
