Section 6: Form of Development

6.1 Densities, Block and Building Types and Heights.

6.1.1 Residential development will comprise of a mix of 1, 2, 3 and 4 bedroom dwellings.

6.1.2 The housing mix which provides a broad range of dwelling type, ensures the development will attract a range of people and age groups.

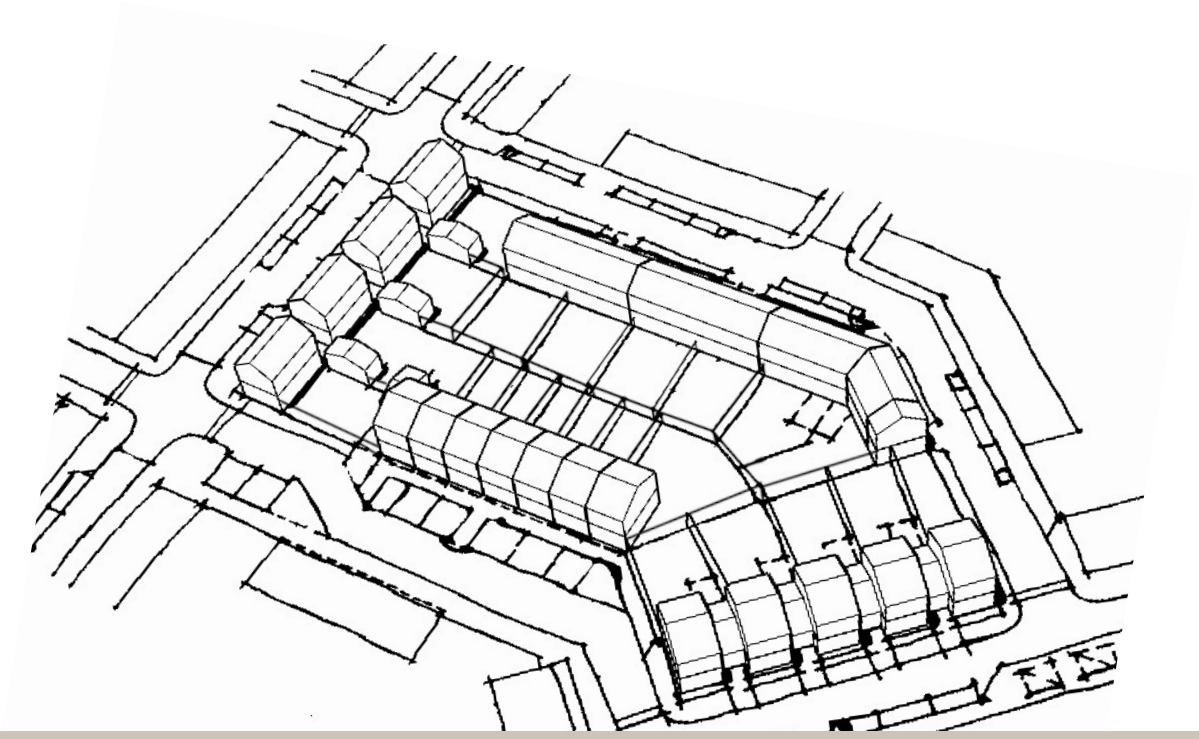
6.1.3 The majority of buildings will be 2 to 2.5 storeys in height albeit with the potential for some three storeys at key locations.

6.1.4 The majority of the development parcels will include back-to-back blocks. However, other typologies will also be appropriate when direct access to properties is limited and to create variety. The following design instructions are to be applied for each block typology.

Back-to-Back Blocks

6.1.5 Perimeter of plots with a core of private gardens that is only accessible to residents. These blocks have a clear distinction between public and private space.

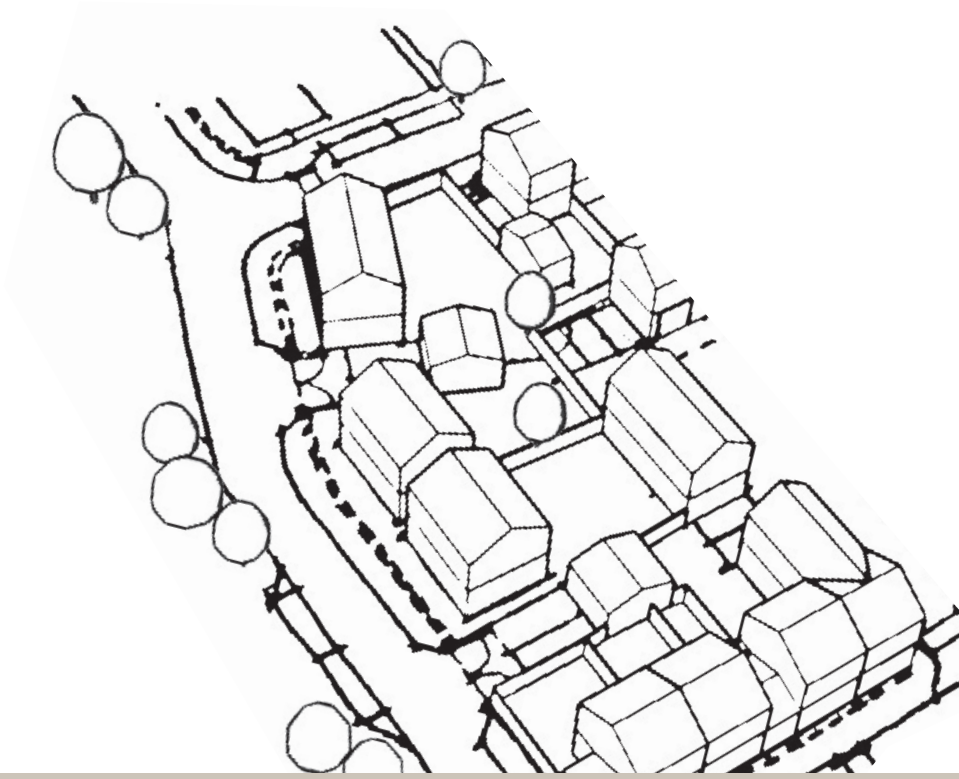
- Blocks shall be located within areas where street standards allow for direct access to / from the plot, or in mixed use blocks where servicing can be arranged from the front / side.
- Parking is provided to the side or front of dwellings, or on-street.
- Each residential dwelling shall have a front pedestrian access relating to the street.
- Fences to be used to delineate rear boundaries of private property.
- Boundary materials, design and details shall complement the building types.



Edge Block

6.1.6 Edge Blocks have one or more frontages that closely abut a rural edge, or an area of accessible open space. Their arrangement is likely to be derived from other block typologies.

- Buildings to be orientated so front elevations face outwards to overlook public areas.
- Buildings should form a positive and attractive edge with a sense of quality and permanence.
- Windows and doors are to overlook movement routes and open spaces.
- Access to property frontages are to be provided for pedestrians and cyclists, and vehicles where it is necessary to form part of a connected network.
- Boundaries are to clearly define plot edges and make a positive contribution to the character of the street and/or space it overlooks.



6.2 Recycling and Waste Management

6.2.1 Provision for the storage of refuse bins is to be integrated within the design of the building envelop or boundary treatments, to avoid clutter within and visual prominence from the public realm.

6.2.2 Individual waste storage shall be located within each plot, out of view from public areas and/or integrated with the garage, where supplied.

6.2.3 Storage to the front of the dwelling is accepted only if adequately screened i.e. within storage box or by boundary treatment.

6.3 Inclusive Design

6.3.1 The built environment can contribute to a more equal, inclusive and cohesive society if the places where we live are designed to be accessible and inclusive. This relates to access but also to feelings of safety and belonging.

6.3.2 Provision of accessibility and adaptability dwellings will be in accordance with the Outline Planning Permission.

6.3.3 The site is relatively flat, and road gradients will therefore ensure ease of use for all members of the community. All on-street footways will be accessible to wheelchairs and buggies, well-connected, overlooked and well lit by street lighting.

6.3.4 Affordable housing should be located in small clusters up to 15 unit clusters throughout the site and designed to be undistinguishable from the market housing.

6.3.5 All the open spaces are well overlooked by adjacent dwellings with no isolated corners. The central green space provides a safe and accessible natural space where different groups can gather, play and relax.
