1	Highway users on Old Vicarage Lane	Low	Low	Adjacent	Partial	Yes	Medium (construction) Medium-Low (year 1) Low (year 15)	This is a representative view for highway users. They experience transient close range views of the site and Old Vicarage Lane. Open close range views of the development's GIF would be observed and the new built development (housing) would be largely screened by the intervening GIF. Transient and close range views of the proposed new access arrangement would be afforded. Users would experience this within an existing highway context. It is considered that the overall experience for highway users would not be significantly effected to any degree such that it would lead to any unacceptable harm.	Moderate-Minor Adverse	Minor Adverse Negligible	Negligible
2	Users of Public Footpath	High-Medium	High-Medium	Within site	Partial	Yes	Medium (construction) Medium -Low (year 1) Low (year 15)	Representative view from Footpath. Open close range views of the site are afforded with views of industrial buildings on skyline and nearby passing trains. Users would experience views of the proposed GIF in the foreground with new built development (housing) beyond. Whilst there would be a clear change in the view and there would be views of new housing it is considered that the overall experience for footpath users would not be significantly affected. Users would walk through the GIF of grassland and woodland.	Moderate Adverse	Minor Adverse	Minor Adverse Negligible
3	Users of Public Bridleway	High-Medium	High-Medium	Within site	Partial	Yes	High-Medium (construction) High-Medium (year 1) Medium (year 15)	Representative view from Bridleway. Open close range views of the site are afforded. Users would experience close range and transient views of the proposed built development (housing, primary school, mixed use local centre and primary street). Clear change in the view from agricultural use to urban. Bridleway retained in 'green corridor'. Experience for users would be different, but it is considered that views of a high quality development would not be intrinsically harmful.	Major-Moderate Adverse	Moderate Adverse	Minor Adverse
4	Residents on Old Vicarage Lane	High	High	Adjacent	Partial	No	High-Medium (construction)	Close range views are afforded of the site, together with first floor views of South Marston. Views would be afforded of the adjacent GIF	Major-Moderate Adverse	Moderate Adverse	Minor Adverse

[1] Variations may occur but the following approach has been adopted:
High= Residents, viewpoints from valued landscapes and heritage assets important recognised viewing points, national/regional/county long distance recreational routes e.g. "The Ridgeway"
High-Medium = Public Right of Way Users
Medium =Footway users alongside highways, open space leisure users
Low = Highway users

							Medium (year 1) Low (year 15)	(allotments) near Old Vicarage Lane with views of new built development (housing) facing Old Vicarage Lane. A small number of receptors (residents in six properties) would be directly impacted upon. Adverse effects would diminish in the long term on account of a maturing GIF which would provide some filtering of the view of built development			
5	Users of Public Bridleway near Mercure Hotel	High-Medium	High-Medium	Adjacent	Partial	Yes	High-Medium (construction) High-Medium (year 1) Low (year 15)	Representative view from Bridleway. Open close range views of the site are afforded together with views of Mercure Hotel and car park, and residential edge of South Marston. Users would experience close range and transient views of the proposed built development (housing). It is considered that views of a high quality development would not lead to a significant adverse impact on the experience for bridleway users.	Major-Moderate Adverse	Moderate Adverse	Minor Adverse
6	Users of Public Footpath near South Marston Brook	High-Medium	High-Medium	Within site	Partial	Yes	High-Medium (construction) High-Medium (year 1) Low (year 15)	Representative view from Footpath. Open close range views of the site are afforded together with views of Rowborough Farm. Users would experience close range and transient views of the intervening GIF (woodland and hedges) with the proposed built development (housing) beyond. Footpath would be contained in a broad corridor of greenspace. The experience for users would be different, but it is considered that views of a high quality development would not lead to a significant adverse impact so as to lead to any unacceptable harm. The maturing GIF would provide some filtering of the view of the built development in the longer term.	Major-Moderate Adverse	Moderate Adverse	Minor Adverse
7	Users of Public Footpath near South Marston Brook	High-Medium	High-Medium	Within site	Partial	Yes	High-Medium (construction) Medium (year 1) Low (year 15)	Representative view from Footpath. Open close range views of the site are afforded together with views of vegetation along Marston Brook. Users would experience close range and transient views of the GIF and the proposed built development (housing) beyond. Retained vegetation along Marston Brook and a maturing GIF would provide some filtering and some screening of the view of the built development. Footpath would be contained in a broad corridor of greenspace. It is considered that views of a high quality development would not lead to a significant adverse impact so as to lead to any unacceptable harm.	Moderate Adverse	Moderate – Minor Adverse	Minor Adverse
8	Highway Users of	Low	Low	Adjacent	Partial	Yes	High-Medium	Transient views for receptors of site and buildings on Nightingale Lane	Moderate	Moderate-Minor	Minor Adverse

VISUAL BASELINE & EFFECTS TABLE (VBET)											
Ref	**Receptor Type**	**Sensitivity of Visual Receptor**		**Magnitude of Visual Effects**				**Commentary**	**Overall Significance of Effect at Construction Phase**	**Overall Significance of Effect at Year 1**	**Overall Significance of Effect at Year 15 [i]**

								new built development (housing) and the GIF. Views of the built development would be observed within the context of the existing backdrop of modern residential properties. It is judged that experience for receptors would not be adversely effected to any significant degree as they already afford view of the residential edge of South Marston.			
18	Highway Users on Thornhill Road	Low	Low	100m	Minimal	Yes	Low (construction) Low (year 1) Low-None (year 15)	Visibility into the site is heavily restricted by the intervening built form and by hedge/tree cover along Thornhill Road. Fleeting views would be afforded of the proposed new access arrangement into the development. This would be observed within an existing highway context that includes nearby roundabouts, 'A' roads, and employment buildings e.g. Keypoint interchange, which are urban influences. There would be no significant adverse impact for receptors.	Minor Adverse-Negligible	Negligible	Negligible
19	Highway Users On A420	Low	Low	200m	Minimal	Yes	Low -None (construction) Low (year 1) Low –None (year 15)	Representative view for highway users. Visibility into the site is restricted by intervening hedges and trees. Users experience views of the buildings along the A420, whilst their main focus is the highway corridor and activity along it. Highway users are of low sensitivity and they are passing through the landscape at speed. The southern part of the site includes an extensive area of GI which would include woodland and tree cover. Views of the built development would, in any event, be screened by existing features within the landscape.	Minor Adverse Negligible	Negligible	Negligible
20	View from AONB Near Bodyhorse Hill	High	High	4.4km	Minimal	No	None (construction) None (year 1) None (year 15)	Representative view from the edge of the AONB. There are some elevated vantage points from the escarpment that provide opportunities for long ranging views across the Upper Thames Clay Vale and Midvale Ridge. The urban area of Swindon is visible and a noticeable feature within the valley. The proposed development would be visible (just), but given the distance (the development would be around 4km away) it would be difficult to percept -certainly for the casual observer and would be seen as part of the urban area of Swindon. As well as distance, hedgelines and trees within the valley provide a further layer of containment which would be reinforced by the GIF. Users would continue to experience long ranging panoramic views across the valley and the proposed development would not materially impact upon these	Negligible	None	None

VISUAL BASELINE & EFFECTS TABLE (VBET)											
Ref	**Receptor Type**	**Sensitivity of Visual Receptor**		**Magnitude of Visual Effects**				**Commentary**	**Overall Significance of Effect at Construction Phase**	**Overall Significance of Effect at Year 1**	**Overall Significance of Effect at Year 15** [i]
		Susceptibility to Change[1]	**Value**	**Distance from Application Boundary (approx. m/km)**	**The Nature of the view. 								views. In conclusion the development would not give rise to any adverse impact on the AONB.			
21	Highway Users Wanborough Road	Low	Low	1.5km	Minimal	Yes	Low-None (construction) None (year 1) None (year 15)	This is an elevated vantage point and highway users afford transient views of the urban/industrial edge of Swindon to include Keypoint interchange. Views of the site are largely screened by intervening hedges and trees as well as the existing built form on the edge of Swindon. View of the proposed development would be difficult to percept.	Negligible	None	None
22	Users of Thornhill Road	Low	Low	200m	None	Yes	None (construction) None (year 1) None (year 15)	No views of the site are afforded for highway users. Thornhill Road Industrial Estate and tree cover effectively screen views of the site.	None	None	None
23	Users of Public Bridleway near Manor Farm	High-Medium	High-Medium	Within site	Partial	Yes	High-Medium (construction) Medium (year 1) Medium-Low (year 15)	Representative view for Bridleway users. Views are afforded of the western and north western part of site to include fields and surrounding tree cover, with filtered views of industrial buildings at Thornhill Road. The Bridleway is retained and is located within a broad area of greenspace. Close range views of the proposed development's primary street would be observed as well as the proposed GIF of woodland, hedges and trees. The experience for receptors would not be adversely effected to any significant degree.	Moderate – Minor Adverse	Minor Adverse	Minor Adverse Negligible
24	Users of Public Footpath near South Marston Farm	High (Residents) High-Medium (Footpath Users)	High-Medium	Adjacent	Partial-Minimal	Yes	High -Medium (construction) Medium (year 1) Low (year 15)	Representative view for residents and Footpath users. To some degree intervening hedges and tree cover restrict views into and across the site. Some views would be afforded of the new built development (housing) together with views of the GIF (woodland, hedges and grassland). A broad landscape buffer/setback is established on the southern edge of the site and a maturing GIF would assist in filtering and softening the view of built development. It is considered that views of a high quality development would not lead to a significant adverse impact so as to lead to any unacceptable harm on these receptors.	Moderate-Minor Adverse	Minor Adverse	Minor Adverse Negligible
25	Users of Highworth Road	Low	Low	2km	None		None (construction) None (year 1)	Slightly elevated section of the road provides distant and long ranging views to the south. Glimpsed views of industrial buildings to the north of South Marston are observed. No views are afforded of the site on	Negligible -None	None	None

VISUAL BASELINE & EFFECTS TABLE (VBET)

							None (year 15)	account of the combination of intervening hedges and trees and the built form of South Marston. Views of the proposed development would be difficult to distinguish as a result of these features.			

[i] Adverse effects are considered to reduce at Year 15 and beyond on account of the following:

a) Receptors becoming accustomed to the change and the view;
b) The built development 'settling' into the landscape; and
c) The maturing GIF of woodland, hedgerow and tree cover which would provide filtering and screening effects.
