Subject: Planning Application S/OUT/13/1555

Dear Madam/Sir

Planning Application S/OUT/13/1555

Thank you for the opportunity to comment on the above planning application. Whilst I understand that development is necessary, I have major concerns relating to the proposed transport infrastructure and increased risk of flooding in the village associated with this application. Please see below my comments: -

Roads

The proposed traffic management systems, both within South Marston village and the surrounding roads do not alleviate my concerns that have been previously expressed with respect to traffic chaos. Plans are in place for other developments including houses at Faringdon, Shrivenham, the Crown Timber location, etc. – the list continues to grow without any end in sight. How will the proposed modifications ever be able to cope with the massive increase in

traffic from all the new houses proposed? This does not even take into account the additional volume of traffic from the industrial sites planned for the A420 near Sainsburys.

However the development in our village will obviously go ahead in one form or another so the changes finally agreed must be started well before the commencement of any house building. If the changes are planned to take place after the commencement of the house building, we all know very well that they will never happen under the excuse of "budget constraints".

In addition, I would like to make the following points: -

- The tunnel under the railway from Rowborough is I understand only going to be started once 1300 houses have been built in the new village. This is totally unacceptable and the tunnel must, in my opinion be built as soon as the development at Rowborough is started otherwise chaos will result with vehicles trying to gain access to the A420 via one of the two existing routes. **If the tunnel is not viable then the new village must not be built. I reiterate that something like the tunnel being built AFTER the house building starts is a very likely candidate for a budget cut/constraint.** Is there a reason why it cannot be started earlier.

- Appendix 7a part 1 Transport Assessment describes how the shuttle signals will operate at the railway bridge on Old Vicarage Lane and will be linked to a signal controlled junction between Old Vicarage Lane and A420. These sets of lights must be synchronised, but this junction is not suitable for the amount of traffic that will use it and vehicles will stack up not only on the A420 trying to turn right/left into Old Vicarage Lane but also down Old Vicarage Lane. The new village must have its own access onto the A420.

- If a road is required from Rowborough onto Old Vicarage Lane it should definitely be restricted to one road only not two as shown on the plans.

- I can only see one vehicular access to the new village centre; this is not enough as this road is likely to be very busy all of the time and extremely busy at peak times. If the South Marston hotel site development goes ahead confirmation should be given now that a second access road into the new village centre will be provided on this site.

- Appendix 7a part 1 Transport Assessment and the 'Addendum to Planning Statement (October 2013) April 2016' state that 'This assessment indicates that the delivery of these proposals will not materially increase the flows of traffic through the village or impede access to the A420 for existing residents' and '… there is no material increase in traffic anticipated through Pound Corner'. I do not understand what is the basis for this statement given what is being proposed. I completely disagree with this assessment and I know that traffic will continue to cut through the village from the A420 along Old Vicarage Lane and then rejoin the A420 at the Sainsbury's roundabout to avoid traffic congestion on the A420. I feel certain Rowborough traffic will also follow this route given the windy road shown on the plans between Old Vicarage Lane and Thornhill Road. Joining the A420 will become a major issue, and so frustrating for residents.

- The backlog on the A420 at the Sainsbury's roundabout and Key Point roundabout is going to be much worse than it is now in my opinion even with the upgrades suggested. This is without

considering the increased traffic if the proposed gasification plant and warehousing at Keypoint go ahead. A Parish Councillor informed me that the new industrial estate opposite Gable Cross will employ 4000 people and will have 5 lanes exiting onto the A420, this can only add to the dreadful congestion that will occur. The White Hart roundabout and the A419 are also of concern; I cannot understand how the proposed changes will ever cope with the massive increase in traffic that will eventually result from this and other developments. I feel that the planning is not being looked at holistically and only from this holistic perspective can the full impact be fully realised. Looking at each part independently of the other changes the true impact significantly.

Flooding

Flooding is a major concern. Policy EN6 of the April 2016 document entitled 'Addendum to Planning Statement (October 2013)' along with Appendix 14a, the revised Flood Risk Assessment do not give me any confidence and the proposed plans to mitigate flooding are insufficient in my view, and will not result in our risk of flooding being the same or less, which is I know the government requirement.

I understand the development behind Thornhill Industrial Estate, including the road access to the south, will mean that relevant off- site areas in line to take increased surface water run-off will exist at the Industrial Estate, Ash Gardens, Manor Park, Manor Farmhouse, Manor Farmyard, Southview Cottages and the Bridleway itself. There appears to be little in the documents that acknowledge that relevant measures will be necessary to protect these areas of land from increased out-flow. None of the photos used in the report cover these areas. The surface water flooding on the bridleway at Manor Farm, which is identified on the Environment Agency Surface Water Flood map, has been ignored, as well as other areas of natural flow across the development site such as flooding at South Marston Farm. All these problems and others that have been highlighted by other individuals and organisations must be addressed prior to the commencement of the development.

I trust all the requirements detailed in Richard Bennett's (Drainage Engineer for SBC) email to Kimberley Corps dated 29.06.2015 relating to surface water drainage and Flood Risk will be adhered to in accordance with Paragraph 103 of NPPF and Policy EN6 of the adopted Local Plan 2026 prior to the start of or as soon as is humanly possible during the development.

I note in the email dated 3.6.2016 to SBC Development Control, Thames Water 's Development Planning Department have identified an inability of the existing waste water infrastructure to accommodate the needs of this application along with other concerns, this justifies my major worries about flooding.

School

In my opinion a second school is not a viable option. Since the safety of the children must be the main priority, a new school should be built away from the existing location and in an area where the road layout can be optimised for safety.

The new alternative school will allow the existing character of the village to be retained and the architecture of the new school will fit in well with the new buildings surrounding it.

I am deeply disappointed that the village I chose to live in because of its character and beauty has the potential to be totally ruined; I understand additional housing and school places are needed but it must be done sympathetically and fairly – which does not seem to be the case.

Does the input of the people who actually live in South Marston today not carry any weight when compared against the commercial objectives of the developers?

I look forward to receiving a response to the above.

Regards

Anver Quadri
