Landscape Receptor Type and Reference	**Judged Sensitivity of Landscape**		**Judged Magnitude of Landscape Effects**		**Commentary**	**Overall Significance of Effect at Construction Phase**	**Overall Significance of Effect at Completion**	**Overall Significance of Effect at Year 15 post completion**
	Susceptibility to Change **High** **Medium** **Low**	**Value** **High** **Medium** **Low**	**Scale or Size of the Degree of Change including degree of contrast/integration) at Stages of Project** **High** **Medium** **Low** **Negligible**	**Where applicable, are the Effects Reversible?** **Yes** **No** **NA**		**Major** **Moderate** **Minor** **Negligible** **None** **Adverse** **Beneficial**	**Major** **Moderate** **Minor** **Negligible** **None** **Adverse** **Beneficial**	**Major** **Moderate** **Minor** **Negligible** **None** **Adverse** **Beneficial**
Landscape Designations:								
North Wessex Downs Area of Outstanding Natural Beauty (AONB)	High (variations will occur)	High (variations will occurs	Negligible (construction) Negligible (year 1) Negligible (year 15)	No	The AONB covers an extensive area of the landscape and occupies higher land to the south of Swindon. The AONB is c4km away from the site at its closest point and the site is difficult to percept because of distance. The site does not play a significant role/contribution in the overall landscape character of the AONB. The development would lie within the setting of the urban area Swindon (which is visible from the AONB) and would be observed as a distant additional urban element within this context. It is considered that the development would not result in any fundamental change on the AONB and would not result in any significant adverse landscape effects upon the landscape character of AONB.	Negligible	None	None
Landscape Character: National								
109 Mid Vale Ridge	High-Medium-Low (Variations will Occur)	High-Medium-Low (Variations will occur)	Low/ (construction) Low (year 1) Low (year 15)	No	The Mid Vale Ridge covers a large area of the landscape. The vast majority of site lies within the LCA. There would be a change and localised initial adverse landscape effects on the LCA as a result in the loss of agricultural land and the change from agriculture to urban development. It is considered that there would be no fundamental change to the characteristics of this substantial landscape receptor and development upon the site would not result in any significant adverse landscape effects upon the *wider* landscape of the Mid Vale Ridge. The GI framework includes the retention of site vegetation and additional habitat creation will strengthen these habitats and provide landscape benefits in the longer term.	Negligible	Negligible	Negligible
108 Upper Thames Clay Vale	High–Medium-Low (Variations will occur)	High-Medium-Low (Variations will occur)	Low (construction) Low (year 1) Low (year 15)	No	The Upper Thames Clay Vale covers a large area of the landscape. A very small part of the site lies within the LCA, but the vast majority of the LCA lies to the south beyond the A420. There is, in broad terms, limited intervisibility between the site and the LCA on account of the railway embankment and intervening hedges and trees. The GI framework would strengthen the existing retained habitats. It is considered that no would be fundamental change to the characteristics of this substantial landscape receptor and development upon the site would not result in any significant adverse landscape effects upon the wider landscape of the NCA.	Negligible	Negligible	Negligible

Landscape Character: Regional/Local								
Wanborough Vale (AONB) North Wessex Downs AONB Integrated Landscape Character Assessment (2002)	High [4] (variations will occur)	High (variations will occur)	Negligible (construction) Negligible (year 1) Negligible (year 15)	No	The LCA lies within the AONB. The LCA lies around 4km from the site. The site does not play a significant role in the overall landscape character of the LCA. The development would lie within the setting of the urban area Swindon (which is visible, in places, from the LCA) and would be observed as a distant additional urban element within this context. It is considered that the development would not result in any fundamental change in the characteristics of this LCA and no significant adverse landscape effects upon the landscape character of LCA would result.	Negligible	None	None
Liddington-Letcombe Open Scarp (AONB) North Wessex Downs AONB Integrated Landscape Character Assessment (2002)	High[5] (variations will occur)	High- (variations will occur)	Negligible (construction) Negligible (year 1) Negligible (year 15)	No	As above	Negligible	None	None
Lambourn Downs (AONB) North Wessex Downs AONB Integrated Landscape Character Assessment (2002)	High [6]	High	Negligible (construction) Negligible (year 1) Negligible (year 15)	No	As above	Negligible	None	None

[4] Variations in value and sensitivity may occur dependant on elements such as landscape condition, landscape features and context. Overall it is considered to be High
[5] Variations in value and sensitivity may occur dependant on elements such as landscape condition, landscape features and context. Overall it is considered to be High
[6] Variations in value and sensitivity may occur dependant on elements such as landscape condition, landscape features and context. Overall it is considered to be High

Midvale Ridge Swindon Borough Council: Landscape Character Areas SPG 2004	Medium	Medium	Low/Medium (construction) Low (year 1) Low (year 15)	No	The LCA covers a large area of the landscape. The majority of the site lies within the LCA. There would be localised adverse landscape effects on the LCA as a result in the loss of agricultural land and the change from agriculture to urban development. Whilst there would be a high adverse magnitude of change on the *site* itself, it is considered that there would be no marked change or effects upon the *wider* landscape character of the Midvale Ridge. The GI framework includes the retention of the landscape fabric (site vegetation/watercourse), compensatory habitats, and additional habitat creation and accessible greenspace that will, once established, provide some landscape benefits in the longer term. The development would not lead to any significant change upon the *wider* characteristics of the LCA such that it would lead to any significant landscape harm, and, consequently, it is considered that there would be no significant adverse landscape effects upon the LCA.	Minor Adverse	Minor Adverse	Negligible
Vale of White Horse	Medium	Medium	Low/Medium (construction) Low (year 1) Low (year 15)	No	The LCA covers a large area of the landscape. The south eastern part of the site lies within the LCA. There would be a localised adverse landscape effects on the LCA as a result in the loss of agricultural land and the change from agriculture to urban development. Whilst there would be a high adverse magnitude of change on the *site* itself, it is considered that there would be no significant adverse landscape effects upon the *wider* landscape character of the Vale of White Horse. The GI framework includes the retention of the landscape fabric (site vegetation/watercourse) compensatory habitats and additional habitat creation and accessible greenspace that will, once established, provide some landscape benefits in the longer term. The development would not lead to any marked impact upon the *wider* characteristics of the LCA such that it would lead to any significant landscape harm, and, consequently, it is considered that there would be no significant adverse landscape effects upon the LCA.	Minor Adverse	Minor Adverse	Negligible
Western Clay Vale	Medium	Medium	Low/Negligible (construction) Negligible (year 1) Negligible (year 15)	No	The LCA cover a large area of the landscape, lying to the east of the site and the River Cole. The development would not lead to any direct impact on the LCA and no marked impact upon the *wider* characteristics of the LCA such that it would lead to any significant landscape harm, and, consequently, it is considered that there would be no significant adverse landscape effects upon the LCA.	Negligible	Negligible	Negligible

LANDSCAPE BASELINE & EFFECTS TABLE (LBET)								
Landscape Receptor Type and Reference	**Judged Sensitivity of Landscape**		**Judged Magnitude of Landscape Effects**		**Commentary**	**Overall Significance of Effect at Construction Phase**	**Overall Significance of Effect at Completion**	**Overall Significance of Effect at Year 15 post completion**
	Susceptibility to Change **High** **Medium** **Low**	**Value** **High** **Medium** **Low**	**Scale or Size of the Degree of Change including degree of contrast/integration) at Stages of Project** **High** **Medium** **Low** **Negligible**	**Where applicable, are the Effects Reversible?** **Yes** **No** **NA**		**Major** **Moderate** **Minor** **Negligible** **None** **Adverse** **Beneficial**	**Major** **Moderate** **Minor** **Negligible** **None** **Adverse** **Beneficial**	**Major** **Moderate** **Minor** **Negligible** **None** **Adverse** **Beneficial**
Site & Immediate Context	Medium	Medium	High (construction) High (year 1) Medium (year 15)	No	The site's landscape character is influenced to varying degrees by its intervisibility with urban components such as passing trains on the elevated railway line and the settlement edge of South Marston, which includes industrial buildings off Thornhill Road. There is, in certain locations within the site, intervisibility with the taller industrial/distribution buildings at South Marston industrial estate, Honda complex, G-Park, Keypoint Distribution and Keypoint Railfreight Interchange. The majority of the site is represented by arable land forming a rather intensively farmed agricultural landscape. The site and the local landscape is not considered to be particularly distinctive in landscape character, nor is it judged to be a landscape of high value or of high sensitivity , certainly not in comparison with the North Wessex Downs AONB. In addition, the site and the immediate area are not subject to any landscape designation at a national or local level. It is considered that the site's landscape has the ability to accept change of the nature and type proposed as demonstrated by the Masterplan (Development Framework Plan) . This includes the provision of an extensive Green Infrastructure Framework which would minimise the impact of development on the landscape and assimilate the built form into a connected mosaic of landscape habitats. The proposed development includes a Green Infrastructure Framework (GIF) that comprises in the order of around 40% of the site. This forms a network of connected greenspaces which will deliver landscape, biodiversity and recreational enhancements. The GIF retains much of site's vegetation to include hedges, mature trees and the South Marston Brook. These features are conserved within areas of greenspace and would be strengthened by new planting and habitat creation in the form of new broadleaved native woodland, species rich hedgerows, native trees and wetland areas. The GI also includes the provision of large areas of grassland that would be managed for both biodiversity benefit and amenity value. This would establish extensive areas of accessible greenspace for active play (to include sports provision), as well natural informal play. The proposed development would lead to a permanent loss of the site's agricultural fields and a change in the site from agricultural use to urban development, which is an inevitable effect for *any* greenfield development. There would be some removal of vegetation and initial disruption in habitats, although the GIF would deliver compensatory habitats. Whilst initial (year 1) effects are considered to be moderate adverse, it is considered that these effects would diminish in the longer term as the multifunctional GIF would deliver benefits such as tree cover and recreational space. In conclusion, the landscape effects as a result of the proposed development are not considered to be significant in the long term.	Moderate Adverse	Moderate Adverse	Minor Adverse
